

Questions for Tom — April 2026

Open decisions on the app. The first nine block launch; the rest can wait. Feel free to write answers inline, or voice-note them and send back.

Must-answer before anything ships

1. Handoff — how do users get the app?

Options: (a) pinned link in the Bookmap Discord traders-lab-tom-b channel, (b) direct download from SDES.DEV with no mention in Discord, (c) private list you curate, (d) something else.

Your answer:

2. App name

The app is currently called **Tom's Lab**. Are you OK with that, or would you rather we rename it? Alternatives: *The Traders Lab Archive* · *Orderflow Library* · *Market Structure Study Tool* · (*your suggestion*). A rename cascades into the splash screen, title bar, docs, and all copy — so decide before anything else.

Your answer:

3. Splash screen / sign

When the app launches, the first thing users see is the splash screen with the app name and SDE-Software attribution. Is the current splash OK, or do you want changes? (If we rename in Q2, the splash changes automatically — this question is specifically about *style*: colours, layout, any imagery.)

Your answer:

4. Attribution copy

In-app copy currently says things like *"searches material from Tom B"*. Alternatives: (a) stay as-is, (b) generic *"searches your imported Discord export"* with no mention of you, (c) your exact preferred wording.

Your answer:

5. "Ask Tom" feature name

The conversational search feature is literally called *Ask Tom*. Comfortable with that? Alternative: *Ask the Archive* (fully generic).

Your answer:

6. Bookmap ToS

Have you checked in with Bookmap about a tool that searches a user's own export of their Discord? Any concerns from their side we should know about now?

Your answer:

7. Content exclusions

Any authors, threads, or topics in the Discord you want **not** indexed, even if they're in the user's export?

Your answer:

8. YouTube / TomTube

OK to let users transcribe and index your YouTube videos for local search? Click-through always opens YouTube — nothing is re-hosted.

Your answer:

9. Wrong answers

When the conversational search returns something incorrect (it will), what should happen?

(a) Feedback button that emails you, (b) feedback goes to SDE-Software, (c) nothing — disclaimer only, (d) other.

Your answer:

Should-answer before v1

10. Icon / logo

Custom icon you'd like, or ship with a placeholder?

Your answer:

11. Updates

When SDE-Software ships a fix, how do users get it? Simplest: manual re-download, user's choice when to update.

Your answer:

12. Beta testers

Want to pick 3–5 people from the Discord to try it first, or go straight to full availability?

Your answer:

13. Feedback / bug channel

Where do users report issues? A specific email? A Discord thread you run? Nowhere (read the manual)?

Your answer:

14. Material refresh

When your pinned posts or PDFs change, is rebuilding the dataset on the user, or do you want SDE-Software to ship updated builds?

Your answer:

Nice to know

15. Donations

Strict \$0 forever, or is a "tip jar to SDE-Software" acceptable?

Your answer:

16. Public demos / screenshots

OK if SDE-Software shows this app at a conference or on social media?

Your answer:

17. Other traders' material

If another trader's students wanted a similar tool built for their community, would you object?

Your answer:

Thanks, Tom. — Sean
